

AUTOMATED METER READING (AMR)

In an effort to increase accuracy, improve efficiency and maximize productivity Fountaintown Gas Co., Inc. has begun the transition to AMR. This allows us to read and monitor your meter from a remote location. AMR works by transmitting a wireless signal from your meter that is detected by the handheld or receiving device. Installing these devices on our meters allows us to read meters in a more efficient manner and due so more precisely in an effort to eliminate billing errors. If your meter has been changed recently and the index on it looks different from the meter you had before, there is a good chance we have already converted your meter.
